About NLI

NLI is a group of companies supplying engineering and fabrication services, technology products and process solutions to the offshore oil and gas industry. We undertake the complete responsibility from concept development to manufactured product.

Our mission is to make life easy for our customers. To fulfill this goal we focus on competence development, high quality, flexibility and punctuality. NLI has today approximately 200 highly qualified employees.

Can you imagine it?

Are your buyers able to see how you have been thinking? Have you ever been drawing imaginary prospects in thin air? Do they still have questions about your products after your presentations?

Whether the answer is "yes" or "no", it is still likely that there may be different levels of insight across the table after the meeting has finished. If your task is to convey your impressions to them in a quick and simple fashion, you need 3D visualization.

To assist your buyers' decision – let NLI Engineering help you give them a qualified look into the future of product development, building site or civil infrastructure plan. Visualizations can help you shorten design cycles, and give substantial support to decisions involved in making a concept (or sale) become reality.

With realistic images and 3D models, it is possible to demonstrate your application's operability, reveal collisions and improve its efficiency before errors are made in real life – hence eliminating the cost of building or fabricating, and then rebuilding it. In fact, by taking out the guesswork from just paper drawings, 3D models and visualizations of projects in development can accelerate the process of approval for you or your clients.

Many businesses are already using 3D models, but to pitch ideas to potential buyers or investors may seem like a huge step with a four-color CAD model. By visualizing core concepts and proposals for your clients and participants, a common understanding of the final outcome of your project will be easier to establish.

NLI Engineering can create comprehensive visualizations of your project – your design, building location or objects – advanced or simplified: Product, building, infrastructure, industrial plant, installation sequence, walk-through, solar studies, and so the name goes on, from sketch-like illustrations to detailed animation – the choice is yours.

Make sure your buyers will thank you for knowing in advance!
